1. Introduction

This report presents the 2022 Relative Development Index (RDI) for the 166 administrative areas of the Republic of Mauritius¹.

The index identifies the most and least developed areas based on three dimensions namely, (i) Housing and Living Conditions, (ii) Education (Literacy, School Enrolment & Educational attainment), and (iii) Employment.

A comparative analysis with the 2011 RDI is also provided to assess progress achieved over the past decade. Hence, a new set of 2011 RDI has been reworked and annexed. The analysis also sheds light on the dimensions influencing the changes in the development levels, whereby a sub-index by dimension has been computed.

1.1 What is Relative Development Index?

The Relative Development Index (RDI) is a composite index that measures the relative achievement of the sub-regions in three dimensions, based on results of the Housing and Population Census (HPC)².

¹ Based on latest 2011 boundaries <https://brdc.mu/wp-content/uploads/2015/11/LGA-2015-Updated.pdf>

² Refer to Annex for detailed methodology

Why using Housing and Population Census data?

The Housing and Population Census (HPC), conducted every ten years, collects detailed information on housing and living conditions and socio-economic characteristics of the whole population at the smallest geographical level. Hence, the Census serves as the most relevant data source for computing the RDI at the lowest administrative area, highlighting the regional disparities in the level of development.

1.2 Benefits and limitation of RDI

The RDI which focuses on non-monetary dimensions of human development and produced at disaggregated level, enables users to identify the priority areas for poverty alleviation and other development programmes. This approach is fully aligned with the 2030 Agenda: Sustainable Development Goal 1 (No poverty), which calls for eradicating poverty in all its forms and ensuring that no one is left behind.

Moreover, it is to be noted that limitation of the index is that it does not cater for other dimensions of development such as health and nutrition.

1.3 Interpretation of RDI

The RDI ranges between 0 and 1, where an index value close to 0 indicates a least developed area, while a value close to 1 indicates a most developed area.

For ease of analysis and interpretation of the indices, the latter have been grouped into six categories, as follows:

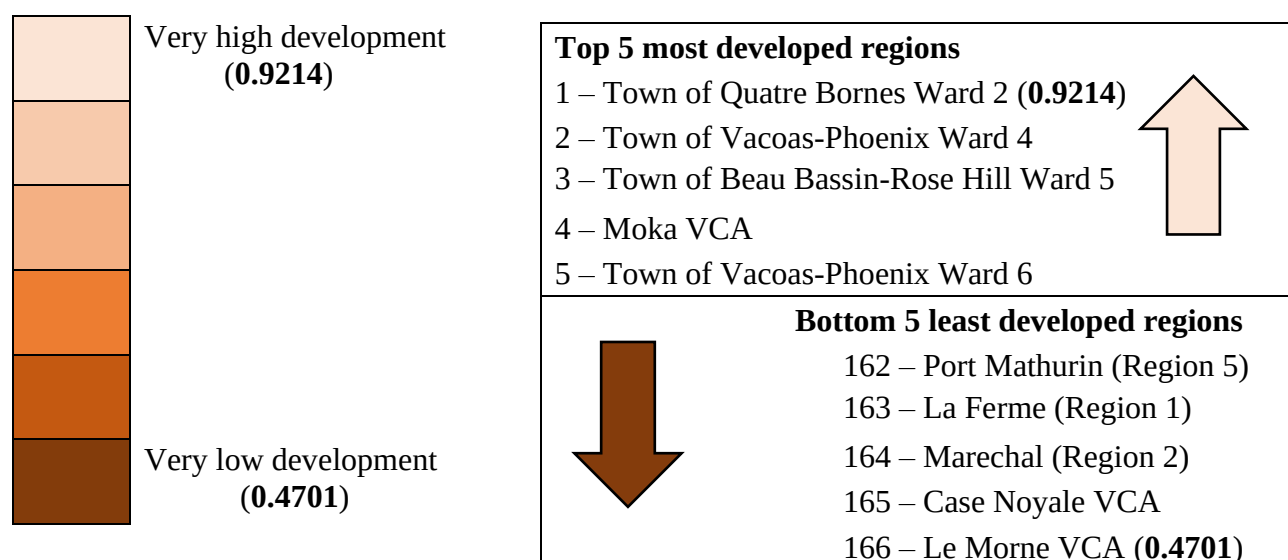

Category	Index
Very high development	≥ 0.85
High development	$\geq 0.80 \text{ \& } < 0.85$
Medium high development	$\geq 0.75 \text{ \& } < 0.80$
Medium low development	$\geq 0.70 \text{ \& } < 0.75$
Low development	$\geq 0.60 \text{ \& } < 0.70$
Very Low development	< 0.60

The index is presented in tabular format as well as thematic maps, providing a more condensed and appealing visualisation that facilitates spatial data analysis (Annex). The methodology for the computation of the RDI is also provided.

2. Highlights

❖ 2022 Relative Development Index (RDI)

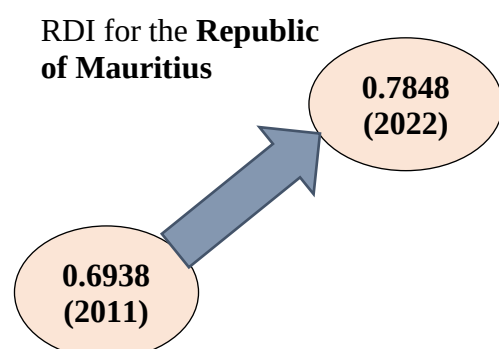

- The 2022 RDI shows varying level of development across the Republic of Mauritius

- The Municipal Wards were generally more developed than the Village Council Areas (VCAs); more than half of the wards were classified as ‘High or very high development’ with index values of at least 0.80.
- Some 10 VCAs reached a very high level of development; they were predominantly from the districts of Moka and Pamplémousses.
- The Island of Rodrigues (0.5769) lagged behind many Municipal Wards and Village Council Areas of the Island of Mauritius.

❖ Changes in RDI over time, 2011 and 2022

- From 2011 to 2022, there has been an overall improvement in the level of development across the Republic of Mauritius, as reflected in the indices. The dimensions also improved.

Improvement in the dimensions

Dimension		2011	2022
	Housing and Living Conditions	0.8430	0.9043
	Education	0.5679	0.7243
	Employment	0.4983	0.5472

3. The 2022 Relative Development Index for the administrative areas

3.1 The overall RDI

Based on results of the 2022 Housing and Population Census, the RDI for the Republic of Mauritius worked out to 0.7848. The RDI for the Island of Mauritius is estimated at 0.7924 compared to 0.5769 for the Island of Rodrigues, indicating that, on average, Rodrigues is relatively less developed than Mauritius.

At regional level, the RDI shows varying level of development

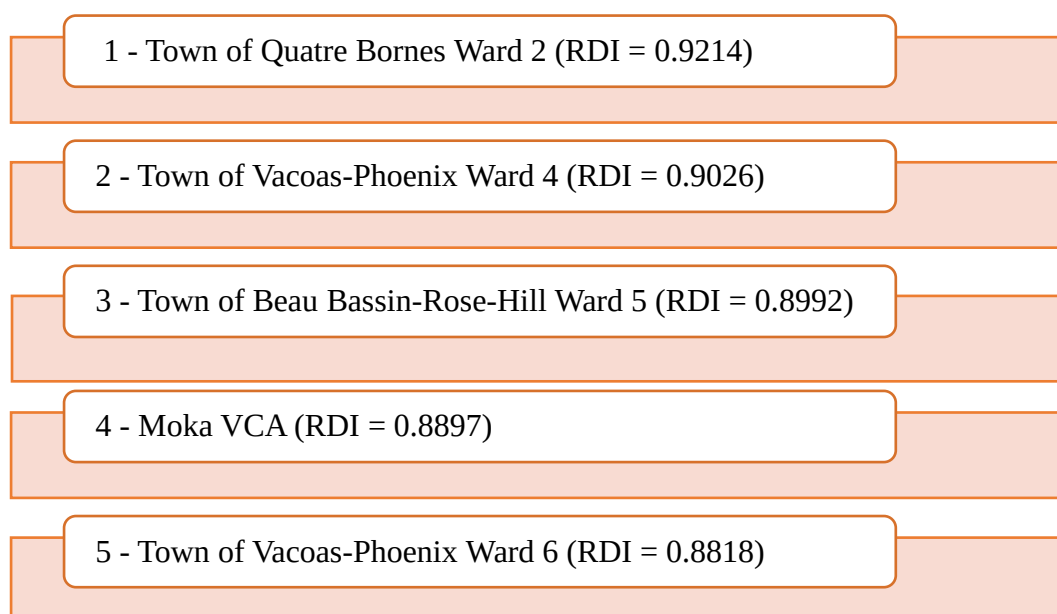

Further disaggregating the RDI by Municipal Wards & Village Council Areas (MVCA) in Mauritius and by Regions of Rodrigues provides a more detailed picture of disparity in the level of development across the country, with regional RDI ranging from 0.4701 (Very low development) to 0.9214 (Very high development)³.

3.2 The most and least developed regions

Town of Quatre Bornes - Ward 2 was the most developed region followed by Town of Vacoas-Phoenix Ward 4

Some 20 administrative areas (10 Wards & 10 VCAs) were categorised as very high development with index values of at least 0.85, accounting for 16.5% of total population of the Republic of Mauritius (12.3% urban and 4.2% rural).

The top five administrative areas are:

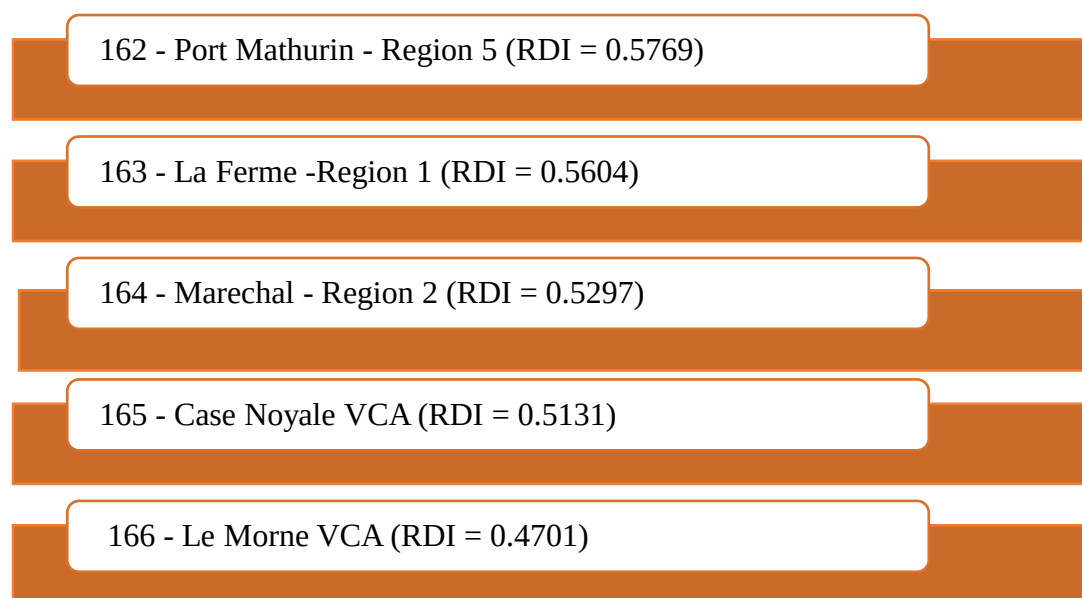

³ Detailed tables, with thematic maps, on RDI by administrative area are annexed.

Case Noyale and Le Morne VCAs were the least developed regions

A total of 25 administrative areas fell under the grouped category ‘Low / Very low development’. This category comprised one ward (Town of Port Louis Ward 1), while the remaining areas consisted of the six Regions of the Island of Rodrigues, and some VCAs. Together, these regions accounted for 10.2% of the total population.

The bottom five administrative areas identified as being in the ‘Very low development’ category are:

3.3 RDI at regional level

The Municipal Wards were generally more developed than the Village Council Areas (VCAs)

More than half of the Municipal Wards were classified as ‘high or very high development’ with index values of at least 0.80 ...

As shown in Table 1, the Municipal Wards were more developed than the VCAs. Twenty out of 30 wards had index values of at least 0.80. These wards are mostly densely populated, thus, accounting for 64.1% of total urban population.

The ten wards with very high level of development were predominantly from the Towns of Vacoas-Phoenix and Quatre Bornes, representing 31.6% of the total urban population.

Table 1 – Number of administrative areas by category of level of development, Republic of Mauritius, 2022

Category of level of development	Municipal Ward		Village Council Area		Regions of Rodrigues		Total	
	No.	% Population	No.	% Population	No.	% Population	No.	% Population
Very high (≥ 0.85)	10	31.6	10	7.2	...	...	20	16.5
High (≥ 0.80 & < 0.85)	10	32.5	44	36.0	...	...	54	33.4
Medium high (≥ 0.75 & < 0.80)	5	18.8	36	28.5	...	...	41	23.7
Medium low (≥ 0.70 & < 0.75)	4	13.8	22	18.8	...	...	26	16.2
Low (≥ 0.60 & < 0.70)	1	3.3	15	8.8	1	16.8	17	6.9
Very low < 0.60)	0	0.0	3	0.7	5	83.2	8	3.3
All categories	30	100.0	130	100.0	6	100.0	166	100.0

..., however, a few wards, particularly those in the Town of Port Louis, lagged behind many VCAs

Ten wards had medium or low level of development, composing all the eight wards of Port Louis, and Wards 1 and 2 of Beau Bassin-Rose Hill.

Some 10 VCAs reached a very high level of development

Ten out of 130 VCAs reached a very high level of development. These were predominantly from the districts of Moka and Pamplemousses. Unlike the Municipal Wards, they were less densely populated and thus, accounted for only 4.3% of the total rural population in the Island of Mauritius.

From Table 1, it is observed that some 80 VCAs (61.5%) were categorised among the ‘High/medium high’ development category. These regions accounted for 64.5% of the total rural population of the Island of Mauritius.

Some 30% of the VCAs fell in categories of ‘Medium-low or low development’

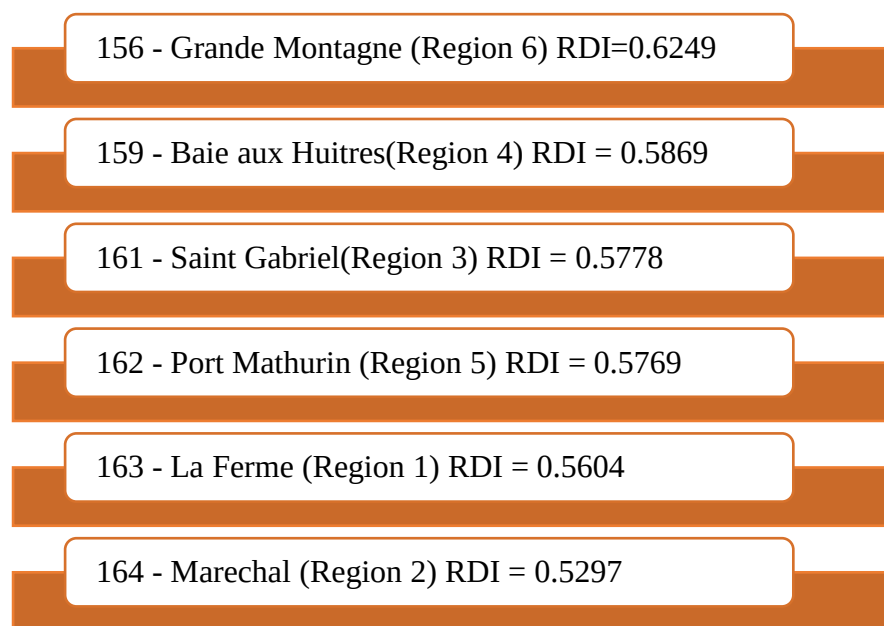

A total of 30 (23.1%) VCAs had a medium-low or low level of development. They were mostly located in the districts of Black River, Flacq, Grand Port and Savanne, and a few of them were situated in coastal regions. (Figure 1)

3.4 RDI for the Island of Rodrigues

The island of Rodrigues lagged behind many MVCAs of the Island of Mauritius

Overall, the Island of Rodrigues reached an RDI value of 0.5769, compared to 0.7924 for the island of Mauritius. The six regions constituting the Island of Rodrigues lagged behind many MVCAs of the Island of Mauritius as they fell under the ‘Low/ Very low development’ category.

Analysis of the regions within the island shows some differences, as reflected in their RDI which ranged from 0.5297 to 0.6249. The six regions of the Island are:

4. A comparison of the 2022 and 2011 RDI

From 2011 to 2022, there has been an overall improvement in the level of development across the Republic of Mauritius.

Over the past decade, there has been an overall improvement in the level of development in the Republic of Mauritius, the RDI increased from 0.6938 in 2011 to 0.7848 in 2022. Similarly, the RDI for the two islands also improved (Table 2).

It is worth noting that the Island of Rodrigues, though having a relatively lower index than the Island of Mauritius, showed a greater improvement (+0.1836-point increase).

Table 2 – Relative Development Index by island, 2011 & 2022

	2011	2022	Difference
Island of Mauritius	0.7040	0.7924	0.0884
Island of Rodrigues	0.3933	0.5769	0.1836
Republic of Mauritius	0.6938	0.7848	0.0910

All administrative areas scored a higher RDI, except Grande Riviere Noire VCA.

All administrative areas (MVCAs and Regions) witnessed an improvement in their level of development – RDI increased from 2011 to 2022⁴. Grande Riviere Noire VCA is the only region which witnessed a slight decrease (-0.0022 point) – which could be attributed to factors such as dwelling ownership, housing construction materials and educational attainment.

Table 3 – Number of administrative areas by category of level of development, Republic of Mauritius, 2011 & 2022

Category of level of development	Number of administrative areas	
	2011	2022
Very high (≥ 0.85)	1	20
High (≥ 0.80 & < 0.85)	4	54
Medium high (≥ 0.75 & < 0.80)	20	41
Medium low (≥ 0.70 & < 0.75)	56	26
Low (≥ 0.60 & < 0.70)	57	17
Very low < 0.60)	28	8
All categories	166	166

⁴ Detailed tables, with thematic maps, by administrative area are annexed.

Administrative areas with high RDI increased

As shown in Table 3, in 2022, the number of administrative areas with high/very high level of development reached 74, up from 5 in 2011. At the lower levels (Low/ Very low), the number decreased significantly from 85 in 2011 to 25 in 2022.

Town of Quatre Bornes – Ward 2 maintained its first position in both 2011 and 2022

An analysis based on RDI rankings shows that Ward 2 of Quatre Bornes maintained its first position in 2011 and 2022. Similarly, Ward 5 of Beau Bassin-Rose Hill and Moka VCA remained at top positions.

13 VCAs, as ‘fast movers’, improved their rankings by more than 30 places ...

In 2022, 13 VCAs showed significant leaps in development, with improvements in their rankings by more than 30 places. The 4 leading VCAs were Britannia, Amitié-Gokhoola, Rivière du Poste, and Espérance Trebuchet.

The 2022 Census results indicate that the improvements in the level of development was mostly driven by people living in less crowded dwellings, more people completed higher education and more people were in employment.

... on the other hand, 10 MVCAs showed drops in their RDI rankings by more than 30

Despite increases in RDI, some nine MVCAs showed drops in their rankings by more than 30 places such as Ward 1 of Port Louis, Trou aux Biches VCA, and Piton VCA – implying their progress was slower than those of other regions.

5. Analysis of RDI dimensions

This part of the analysis sheds light on factors influencing the changes in the development levels by dimension namely, (i) Housing and Living Conditions, (ii) Education (Literacy, School Enrolment & Educational attainment), and (iii) Employment, based on their sub-indices.

Table 4 – Sub-Indices by dimension, Republic of Mauritius, 2022

Dimension		2022 Sub-Index		
		Average	Minimum	Maximum
	Housing and Living Conditions	0.9043	0.5071	0.9881
	Education	0.7243	0.4391	0.9350
	Employment	0.5472	0.1210	0.9237

As shown in Table 4, in 2022, the sub-indices for the 3 dimensions show varying levels of disparity. The widest gap is observed in the ‘Employment’ dimension, whereby their index values ranged from 0.1210 to 0.9237; followed by the ‘Education’ dimension (0.4391 to 0.9350). In contrast, the ‘Housing and Living Conditions’ dimension had the smallest disparity (0.5071 to 0.9881).

From 2011 to 2022, the sub-indices of the dimensions also improved

	Dimension	2011	2022
	Housing and Living Conditions	0.8430	0.9043
	Education	0.5679	0.7243
	Employment	0.4983	0.5472

Housing and Living Conditions

In 2022, the ten administrative areas with the lowest sub-index values for ‘Housing and Living Conditions’ comprised 4 VCAs and the 6 regions of the Island of Rodrigues (Table 5), showing a certain degree of disparity in the housing conditions at regional level. Moreover, it is worth

noting that the level of development for housing conditions was primarily affected by materials of construction and overcrowding of dwellings.

The analysis of housing and living conditions data reveals that the access to basic amenities like piped water, electricity and flush toilet facilities was relatively high across regions. However, for the Island of Rodrigues, the proportion of flush toilet facilities was relatively lower, fluctuating around 75%.

On the other hand, some regions had lower proportions of dwellings with concrete walls and roofs, and high overcrowding rate⁵ and thus, leading to a lower housing and living conditions.

Table 5 – Summary statistics on ‘Housing and Living Conditions’ for the lowest 10 administrative areas, Republic of Mauritius, 2022

Administrative areas	Housing and Living Conditions sub-index	% of households					% of owner-occupied households
		with piped water	with electricity	with flush toilet	living in dwellings of concrete walls/roof	with 1 or more rooms per person	
Republic of Mauritius	0.9043	99.7	99.7	98.5	95.8	86.4	90.5
Le Morne VCA	0.5071	94.3	94.5	92.8	59.4	69.9	91.2
Case Noyale VCA	0.5974	96.4	96.6	90.7	72.2	62.0	90.4
Marechal (Region2)	0.6739	98.0	98.4	64.7	79.4	71.6	96.6
Port Mathurin (Region 5)	0.6931	98.8	98.1	74.2	79.1	75.0	91.8
La Ferme (Region 1)	0.6997	98.7	98.0	70.7	80.2	75.1	95.3
Grande Rivière Noire VCA	0.7066	99.3	98.5	98.2	79.8	81.0	69.9
Saint Gabriel (Region 3)	0.7086	98.2	98.1	69.5	82.3	78.0	95.5
Baie aux Huitres (Region 4)	0.7351	99.1	98.3	76.9	81.9	77.7	93.3
Grande Montagne (Region 6)	0.7394	99.2	98.6	75.1	82.1	74.4	95.4
Bambous Virieux VCA	0.7474	96.6	98.0	91.2	88.1	71.9	96.0

Education (Literacy, School Enrolment & Educational attainment)

The ten administrative areas with the lowest sub-index values for ‘Education’ consisted of 8 VCAs and 2 Regions of Island of Rodrigues (Table 6). The key factors influencing the level of development for education in these administrative areas were: secondary school enrolment, and performance in Cambridge School Certificate.

⁵ Overcrowding rate is the percentage of the population living in an overcrowded household.

The primary school enrolment rate and literacy rate⁶ were high in these areas. On the other hand, both secondary enrolment and proportion of population having at least a minimum qualification of a School Certificate were lower – thus contributing to a lower education sub-index.

Table 6 – Summary statistics on ‘Education’ for the lowest 10 administrative areas, Republic of Mauritius, 2022

Administrative area	Education sub-index	% population aged 18 years & over with educational level $\geq$ SC	Primary enrolment ratio (%)	Secondary enrolment ratio (%)	Literacy rate of population aged 10+ (%)
Republic of Mauritius	0.7243	43.8	97.0	80.0	93.4
Case Noyale VCA	0.4391	21.4	97.1	62.9	87.0
Le Morne VCA	0.4422	21.3	97.6	65.2	85.1
Baie aux Huitres (Region 4)	0.5050	27.0	95.3	76.4	84.5
Bambous Virieux VCA	0.5117	24.0	100.0	67.8	85.2
Bois des Amourettes VCA	0.5123	26.4	99.3	72.6	82.1
Marechal (Region 2)	0.5177	25.8	97.8	78.0	81.3
Grand Sable VCA	0.5227	30.7	97.5	73.6	83.3
Cascavelle VCA	0.5256	31.0	94.2	74.0	88.1
Gros Cailloux VCA	0.5268	27.4	95.3	76.7	86.1
Chamarel VCA	0.5280	20.8	96.9	66.7	93.4

Employment

The ten administrative areas with the lowest Employment sub-index values consisted of 5 VCAs of Mauritius and 5 regions of Rodrigues (Table 7). The main factor contributing to the lower levels of development is the proportion of employed persons working as managers, professionals, or technicians. These areas showed lower representations (9.7% to 21.7%) in terms of higher-grade occupations compared to the national average of 28.2%.

⁶ Literacy rate refers to proportion of persons who can, with understanding, both read and write a short, simple statement in their everyday life.

Table 7 – Summary statistics on ‘Employment’ for the lowest 10 administrative areas, Republic of Mauritius, 2022

Administrative area	Employment sub-index	Employment rate (%)	% employed as Managers, Professionals, and Technicians and associate professionals ²
Republic of Mauritius	0.5472	92.6	28.2
Marechal (Region 2)	0.1210	84.3	15.7
Grand River South East VCA	0.1625	85.2	16.3
La Ferme (Region 1)	0.1810	86.1	14.9
Saint Gabriel (Region 3)	0.1996	85.7	18.3
Bois des Amourettes VCA	0.2097	87.5	12.7
Bambous Virieux VCA	0.2488	89.3	9.7
Port Mathurin (Region 5)	0.2504	86.2	21.7
Bénarès VCA	0.2635	89.4	10.8
Town of Port Louis Ward 5	0.2958	87.4	21.6
Baie aux Huitres (Region 4)	0.3064	88.3	19.3

6. Annex

6.1 Methodology

What is Relative Development Index?

The Relative Development Index (RDI) is a composite index that measures the relative achievement of the sub-regions of the country in dimensions of development.

The RDIs for the MW and VCAs are expressed in terms of scores and ranks

How to interpret the Relative Development Index of electoral regions?

The RDI ranges between 0 and 1, where index values near 0 indicate the least developed areas and index values near 1 indicate the most developed areas.

Data source

The RDI is computed using the Housing and Population Census data. The links to access the Housing and Population Census questionnaires are as follows:

2022 Census of Dwellings:

https://statsmauritius.govmu.org/Documents/Census_and_Surveys/Census2022/Housing%20Census%20Questionnaire%202022.pdf

2022 Population Census:

https://statsmauritius.govmu.org/Documents/Census_and_Surveys/Census2022/Population%20Census%20Questionnaire%202022.pdf

The variables used under the 3 dimensions are as follows:

Housing and Living Conditions	Education	Employment
•% of households having piped water, •% of households having electricity, •% of households having flush toilet, •% of households living in dwellings made of concrete, •% of households having one or more rooms used for living purposes per person, •% of households who own their dwelling	•% of population aged 18 years and over having at least School Certificate or equivalent educational attainment, •primary enrolment ratio, •secondary enrolment ratio, •literacy rate of the population aged 10 years and over	•employment rate of the population aged 16 years and over, •% of the employed population engaged as Managers, Professionals and Technicians, i.e. legislators, senior officials and managers; professionals; and technicians and associate professionals.

Computation of the RDI

The RDI is computed for each area 'i', that is, Municipal Wards and Village Council Areas and variables j

$$H_{ij} = \frac{x_{ij} - \text{Minimum value}}{\text{Maximum value} - \text{Minimum value}}$$

where,

i: 161 areas i.e. Municipal Wards and Village Council Areas, and island of Rodrigues

j: 12 variables

x_{ij} : values for 161 areas and 12 variables

Steps to calculate the RDI are:

- i. the proportion (x_{ij}) is calculated for each variable by area
- ii. the maximum and minimum values of x_{ij} for each variable for 2011 and 2022 are identified
- iii. the H_{ij} is calculated; and
- iv. finally, the index for each area is obtained by averaging the H_{ij} for all variables.

Example: Let us consider the development variable for **variable 1** - % of households with piped water for **area 1** – Albion VCA

1. $x_{11} = 99.83\%$
2. Min x_{1j} for the years 2011 and 2022 = 88.55%
3. Max x_{1j} for the years 2011 and 2022 = 100.0%

$$\text{Development Index : } H_{11} = \frac{99.83 - 88.55}{100.00 - 88.55} = 0.9855$$

4. Steps 1 – 3 are repeated for the other 11 variables
5. The development index H_{ij} for Albion VCA is, then, obtained by averaging the indices for the 12 variables

$$H_{ij} = \text{Average of } (0.9855, 0.9532, 0.9951, 0.9365, 0.8521, 0.6515, 0.8864, 0.6172, 0.7349, 0.9148, 0.8269, 0.8225) = \mathbf{0.8481}$$

6.2 Tables
